## Election/Restrictions

This application contains claims directed to the following patentably distinct species:

- 1. The turbine blade formed of Fe based alloy having a crystallographic orientation having a high modulus direction aligned with a primary direction of the turbine blade.
- 2. The turbine blade formed of Ni based alloy having a crystallographic orientation having a high modulus direction aligned with a primary direction of the turbine blade.
- 3. The turbine blade formed of Co based alloy having a crystallographic orientation having a high modulus direction aligned with a primary direction of the turbine blade.
- 4. The turbine blade formed of Mo based alloy having a crystallographic orientation having a high modulus direction aligned with a primary direction of the turbine blade.
- 5. The turbine blade formed of Nb based alloy having a crystallographic orientation having a high modulus direction aligned with a primary direction of the turbine blade.
- 6. The turbine blade formed of Al based alloy having a crystallographic orientation having a high modulus direction aligned with a primary direction of the turbine blade.

7. The turbine blade formed of Ti based alloy having a crystallographic orientation having a high modulus direction aligned with a primary direction of the turbine blade.

The species are independent or distinct because each species is directed to a different base alloy of the turbine blade (Fe, Ni, Co, Mo, Nb, Al, and Ti) having the crystallographic orientation, each of which requires searches in separate subclasses.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1-2, 11-13, and 22-29 appear to be generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

A telephone call was not made to request an oral election to the above restriction requirement due to the complexity of the requirement.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the

Art Unit: 3745

application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christopher Verdier whose telephone number is (571) 272-4824. The examiner can normally be reached on Monday-Friday from 10:00-6:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Edward K. Look can be reached on (571) 272-4820. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free)
